

# SINGLE MANIFOLD

The single flange mounted manifolds are designed to be used on the delivery side of a vertical pump set to reduce installation time and ensure even flow and control. The manifolds come in three main sizes to suit different pump ports and flow rates. Each one has a single 1" port for a valve, pressure tank or hose, two 1/4" ports for pressure gauges or pressure transducers and a mounting point for a support foot.

#### TECHNICAL FEATURES:

- Material: 304 Stainless Steel
- Welded joints: TIG welded
- Surface treatment: degreasing, pickling and electropolishing.
- Threaded ends: BSP/T
- Nominal working pressure: 16 bar
